SUMMARY

Detail-oriented and analytical Cybersecurity Specialist with a strong foundation in threat detection, incident response, security monitoring, and secure system architecture. Experienced in monitoring infrastructure, investigating security events, conducting incident triage, and implementing effective remediation strategies across network, application, and cloud environments.

Possesses strong technical expertise in network security, Linux and Windows administration, vulnerability management, log analysis, and cloud security. Adept at applying industry frameworks including MITRE ATT&CK, NIST Incident Response Lifecycle, and OWASP Top 10 to identify, analyze, and mitigate security risks. Combines cybersecurity expertise with full-stack development experience to design and maintain secure, resilient, and scalable systems.

EDUCATION

Bayero University Kano (BUK)

Bachelor of Science (B.Sc.) in Cyber Security, Relevant Coursework: Cryptography, Network Security, Digital Forensics, Operating Systems Security, Ethical Hacking, Information Security Management *Graduated: 2023*

EXPERIENCE

Cybersecurity Specialist & Systems Engineer

March 2026 – Present

LimboTech Solutions

Key Achievements

- Monitor and analyze security alerts across client network infrastructures, cloud environments, and web applications using logging and security monitoring platforms.
- Perform incident triage, containment, isolation, and remediation activities for detected security anomalies and suspicious events.
- Investigate unauthorized access attempts and potential compromise indicators to reduce organizational security risks.
- Lead vulnerability management initiatives by conducting routine assessments, vulnerability scans, and remediation tracking.
- Design, implement, and maintain secure infrastructure baselines across cloud and hybrid environments.
- Collaborate with development teams to address identified vulnerabilities and strengthen overall security posture.
- Draft and maintain security procedures, incident response playbooks, and operational documentation.
- Support audit preparation efforts through security documentation and compliance-focused processes.
- Improved client security visibility through centralized monitoring and alert analysis.
- Reduced attack surface exposure through proactive vulnerability remediation initiatives.
- Developed incident response documentation to standardize security operations.

Cybersecurity & Technical Trainer (NYSC SAED)

November 2025 – May 2026

National Youth Service Corps (NYSC) Program

Key Achievements

- Delivered cybersecurity training covering network security, digital safety, secure computing practices, and cyber threat awareness.
- Designed and facilitated practical laboratory exercises focused on threat detection, incident analysis, and endpoint security.

- Conducted training sessions on indicators of compromise (IOCs), attack vectors, and security monitoring concepts.
- Mentored participants on cybersecurity career development and industry best practices.
- Assisted learners in understanding standard security frameworks and incident response methodologies.
- Successfully trained hundreds of participants on cybersecurity fundamentals and defensive security practices.
- Developed practical cybersecurity exercises that enhanced learner engagement and technical understanding.

Full Stack Developer & Security Engineer (Contract)

2023 – 2025

Independent Tech Consultancies

Key Achievements

- Conducted security code reviews and vulnerability assessments for web applications and enterprise software solutions.
- Implemented application security controls including authentication, authorization, and input validation mechanisms.
- Configured access controls, endpoint protection settings, and security monitoring capabilities.
- Performed patch management and operating system hardening activities.
- Managed server configurations, log aggregation, and security auditing for small-to-medium business environments.
- Assisted organizations in identifying and mitigating web application security risks.
- Conducted security assessments for high-value business applications, including a \$3.5 million invoice and receipt management system.
- Improved application security posture through secure development and review practices.

PROJECTS

SIEM Deployment & Log Analysis Sandbox

- Architected and deployed a dedicated cybersecurity laboratory utilizing open-source SIEM technologies.
- Integrated Windows Event Logs and Linux Syslog data sources for centralized monitoring.
- Developed custom correlation rules to detect:
- Brute-force authentication attempts
- Privilege escalation activities
- Lateral movement techniques
- Suspicious account behavior
- Mapped attack techniques against the MITRE ATT&CK framework.
- Created a comprehensive incident response playbook outlining containment, eradication, and recovery procedures.
- Technologies Used: SIEM Platform, Windows Event Viewer, Linux Syslog, MITRE ATT&CK, Security Monitoring Tools

Secure Web Application Architecture

- Designed and deployed secure web applications using modern security best practices.
- Implemented cryptographic protections for sensitive data handling.
- Enforced secure authentication and session management controls.
- Performed manual threat modeling exercises to identify attack vectors and potential vulnerabilities.
- Implemented application-level security controls to address OWASP Top 10 risks.
- Conducted security reviews and remediation activities throughout the software development lifecycle.
- Technologies Used: PHP, JavaScript, MySQL, Authentication Frameworks, Secure Session Management

TECHNICAL SKILLS

Security Monitoring & Alert Management

SIEM Monitoring and Log Analysis

Incident Detection and Response

Incident Triage and Escalation

Threat Hunting

Root Cause Analysis
Security Event Correlation
Indicators of Compromise (IOC) Analysis
Network Security
Vulnerability Assessment and Remediation
Operating Systems Administration (Windows & Linux)
Endpoint Security
Firewall and Access Control Management
Cloud Security
Secure System Architecture
Security Baseline Configuration
MITRE ATT&CK Framework
NIST Incident Response Lifecycle
OWASP Top 10
Risk Assessment Methodologies
Compliance Documentation
Security Policies and Procedures
Audit Readiness Support
Python Scripting
Bash Scripting
Security Automation
Web Application Security
Secure Code Review
Full Stack Development
Authentication & Session Security
SIEM Monitoring
Log Analysis
Threat Detection
Incident Response
Windows Administration
Linux Administration
Python
PHP
JavaScript
Bash
MySQL
HTML5
CSS3
Secure Web Development
Cloud Security Fundamentals
System Hardening
Vulnerability Management
Infrastructure Security
NIST Cybersecurity Framework

CERTIFICATIONS

CompTIA Security+ | CompTIA

CompTIA Cybersecurity Analyst (CySA+) | CompTIA
Blue Team Level 1 (BTL1) | Security Blue Team
Certified Information Systems Security Professional (CISSP) – Associate / In Progress
Splunk Core Certified User | Splunk
Microsoft Certified: Azure Security Engineer Associate (AZ-500) | Microsoft
Google Cybersecurity Professional Certificate | Google / Coursera
Prep2Soar Certificate | Mastercard Foundation Associate Programme (June 2026)

PROFESSIONAL ATTRIBUTES

Analytical Problem Solving; Incident Investigation; Security Documentation; Technical Training & Mentorship; Risk Assessment; Team Collaboration; Attention to Detail; Continuous Learning; Communication Skills
